

Collaboration Services

FRAMES Online Collaboration: FRAMES users from any agency or organization can log on to MyFRAMES to access online project collaboration technology.

Collaboration services include:

- document sharing
- announcements
- calendars
- discussions
- tasks
- notifications and subscriptions

Fire-related information and
technology at your fingertips!

Fire Research and Management Exchange System (FRAMES)

<http://frames.nbii.gov>

The goal of FRAMES is to provide a systematic method of exchanging information and transferring technology between wildland fire researchers, managers, and other stakeholders in order to make projects, tools, documents, data, and other information resources easy to find, access, distribute, compare, and use. Publicly accessible content on FRAMES is organized into three main areas:

- **Subject Areas**
- **Geographic Areas**
- **Partner Sites**

A user can browse for content by visiting pages within these areas, or a user can directly search and browse content in the FRAMES Resource Cataloging System (RCS).

Subject Areas: Find resources (i.e., data, documents, tools, projects, programs and web pages) organized by subject.

Geographic Areas: Find regionally significant information resources and tools that correspond to the U.S. Geographic Area Coordinating Centers (GACCs).

Partner Sites: Visit sites that are operated and maintained by partner projects and organizations in order to share pertinent data, publications, and other materials.

Southern Fire Portal

The Southern Fire Portal provides information about fire science and technology relevant to the southern United States (Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, and Virginia) and the territories of Puerto Rico and the Virgin Islands. Our goal is to provide “one-stop shopping” for resource managers, decision makers, scientists, students, and communities who want access to the results of efforts to understand and manage fire and fuels in the South.

Through the Southern Fire Portal you can access information about the Southern Fire Exchange:
http://frames.nbii.gov/southern_fire_exchange

Don't miss these outstanding fire resources from our partners!
